Here are the complete data ranges for each sensor parameter and the risk level they'll trigger:

Temperature (°C)

Risk Level	Range	Example
✅ Normal	18 – 24	21
🟡 Early Risk	15 – 17 or 25 – 28	27
🟠 Medium Risk	12 – 14 or 29 – 30	30
🔴 Critical	< 12 or > 30	35

Humidity (%)

Risk Level	Range	Example
✅ Normal	50 – 70	60
🟡 Early Risk	40 – 49 or 71 – 80	75
🟠 Medium Risk	30 – 39 or 81 – 90	85
🔴 Critical	< 30 or > 90	95

Ammonia (ppm)

Risk Level	Range	Example
✅ Normal	< 10	5
🟡 Early Risk	10 – 20	15
🟠 Medium Risk	21 – 40	30
🔴 Critical	> 40	50

CO_2 (ppm)

Risk Level	Range	Example
✅ Normal	< 550	400
🟡 Early Risk	550 – 800	650
🟠 Medium Risk	801 – 1100	950
🔴 Critical	> 1100	1500

Sound Level (dB)

Risk Level	Range	Example
✅ Normal	< 58	45
🟡 Early Risk	58 – 65	62
🟠 Medium Risk	66 – 72	70
🔴 Critical	> 72	80

Bird Movement (%)

Risk Level	Range	Example
✅ Normal	> 70	80
🟡 Early Risk	56 – 70	65
🟠 Medium Risk	45 – 55	50
🔴 Critical	< 45	30

Tip: The overall Health Status and Stress Level are calculated from the combined scores of all 6 sensors. So even if no single sensor is "Critical", having many at "Medium Risk" can still trigger a Critical overall health status.
